

RadioNet Monitoring
fast • reliable • secure

What is RadioNet?

RadioNet Monitoring is a secure alarm monitoring system for your home or business that uses the available mobile networks and connects directly to your existing alarm system. It's a reliable alternative, or total replacement, to fixed landline monitoring and the most secure way to transport information from your alarm system to your monitoring centre.

Why choose RadioNet?

RadioNet Monitoring is the original alarm monitoring radio network with over 14 years experience and is New Zealand owned and operated. RadioNet offers a secure path from your alarm system over a completely private network, with the sole purpose of sending and receiving alarm communications, making us your best solution for wireless alarm monitoring.

RadioNet Enterprise

Combining advanced GPRS Technology with a fully managed network, this full-featured, powerful transmitter raises the bar in wireless security communication.

Benefits

- No need for a traditional landline
- Unable to be interfered with by intruders
- Alarm monitoring cannot be bypassed by cutting a phone line
- Enables fast notification of security breaches to the monitoring centre
- No landline or call fee charges
- New Zealand owned and operated
- Totally private network, separate from general public internet services
- Alarm traffic verification throughout the entire communication process
- We are capable of remotely changing programming
- Tested hourly for your peace of mind
